Responsabile scientifico: Prof. Pierfrancesco Bassi

SESSIONE II: RENE
Moderatore: P. Bassi

Ruolo della realtà aumentata tridimensionale nella nefrectomia parziale assistita da robot.
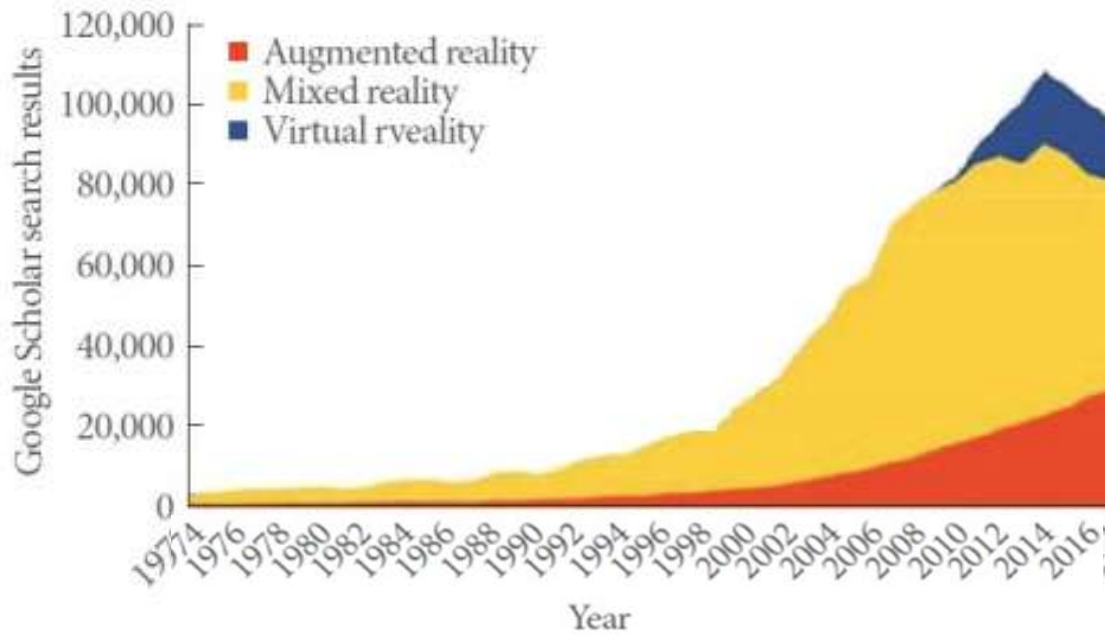

S. Perdonà

ISTITUTO NAZIONALE TUMORI
IRCCS - Fondazione Pascale

La realtà aumentata consiste nell'arricchimento della percezione sensoriale umana mediante informazioni, in genere manipolate e convogliate elettronicamente, che non sarebbero percepibili con i cinque sensi.

'Augmented Reality in Operating Room'

1995 - Operating microscope

• First attempt by Edwards et al. 1995 at Guy's Hospital, London

• External mount, stereo view

**1996 - AR on External Monitor**

• Kikinis, Jolesz, Grimson, et al 1996 at Brigham and Women's Hospital

• Mono, external mount

2000 - Operating binocular

• Birkfellner, Figl et al. 2000:

Varioscope AR at Vienna General Hospital

**2000 - Head mounted display**

• Sauer et al. 2000 at Siemens Corporate Research, NJ

• Stereo video see through

Impact of Three-dimensional Printing in Urology: State of the Art and Future Perspectives. A Systematic Review by ESUT-YAUWP Group

IRCCS - Fondazione Pascale

Le immagini vengono acquisite attraverso uno specifico protocollo di acquisizione

Acquisizione
Immagini

# Le diverse strutture anatomiche vengono identificate e separate

Segmentazione

I dati vengono ricostruiti in 3D in un modello navigabile e interattivo

Modello 3D
virtuale

# Una volta approvato il progetto di stampa del device con il medico, il device viene prodotto

Conferma del medico

Produzione Device

HA3D™ Virtual Model Pre-operative planning

**MyMedics platform** Pre-operative planning.

Surgery in Motion

Hyperaccuracy Three-dimensional Reconstruction Is Able to Maximize the Efficacy of Selective Clamping During Robot-assisted Partial Nephrectomy for Complex Renal Masses

Francesco Porpiglia [*], Cristian Fiori, Enrico Checcucci, Daniele Amparore, Riccardo Bertolo

Division of Urology, University of Turin, San Luigi Gonzaga Hospital, Orbassano (Turin), Italy

CONCLUSIONS: La simulazione preoperatoria dell'ischemia selettiva è risultata fattibile ed efficace con la ricostruzione HA3D. In tutti i casi RAPN eseguiti, il clampaggio selettivo ha avuto successo, evitando l'ischemia del parenchima renale sano. Una stretta collaborazione tra urologi e bioingegneri è necessaria per migliorare questa tecnologia.

Review – Education

Impact of Three-dimensional Printing in Urology: State of the Art and Future Perspectives. A Systematic Review by ESUT-YAUWP Group

Giovanni E. Cacciamani [a,b,*], Zhamshid Okhunov [b,c], Aurus Dourado Meneses [b,d], Moises Elias Rodriguez-Socarras [b,e], Juan Gomez Rivas [b,f], Francesco Porpiglia [g], Evangelos Liatsikos [h], Domenico Veneziano [b,i]

CONCLUSIONS: Three-dimensional printing shows revolutionary potentials for patient counseling, pre- and intraoperative surgical planning, and education in urology. Together with the *"patient-tailored" presurgical planning*, it puts the basis for 3D-bioprinting technology. Although costs and "production times" remain the major concerns, this kind of technology *may represent a step forward to meet patients' and surgeons' expectations.*

IRCCS - Fondazione Pascale

L'immagine TC preoperatoria è stata segmentata manualmente per generare un modello di superficie 3D del rene, del tumore e del sistema collettore

**Trasferimento accurato dell'immagine segmentata del rene 3D-CT sopra il video endoscopico**

Figure 1. Flowchart displaying intermediary steps needed to achieve successful three-dimensional registration of p erative computed tomography image to live stereoscopic video.

Augmented Reality - RAPN

Surgery in Motion

Three-dimensional Augmented Reality Robot-assisted Partial Nephrectomy in Case of Complex Tumours (PADUA ≥10): A New Intraoperative Tool Overcoming the Ultrasound Guidance

Francesco Porpiglia[a,*], Enrico Checcucci[a], Daniele Amparore[a], Federico Piramide[a], Gabriele Volpi[a], Stefano Granato[a], Paolo Verri[a], Matteo Manfredi[a], Andrea Bellin[a],
Obiettivo: Valutare l'accuratezza dei sistemi di Realtà Aumentata statica ed elastica HA3D nell'**identificazione di tumori e strutture intrarenali durante RAPN**, rispetto agli ultrasuoni standard (US).

Risultati: l'uso della guida 3D AR consente di identificare correttamente la lesione e le strutture intraparenchimali con <u>una percezione 3D più accurata della posizione e della natura delle diverse strutture rispetto alla guida ecografica 2D standard ed un minore</u> rischio di complicanze <u>legate alla chirurgia.</u>

Conclusioni: I modelli HA3D che si sovrappongono all'anatomia in vivo durante AR-RAPN per tumori complessi possono essere <u>utili per identificare la lesione e le strutture intraparenchimali difficili da visualizzare</u> solo con gli US

Systematic review of augmented reality in urological interventions: the evidences of an impact on surgical outcomes are yet to come.

Bertolo R[1,2], Hung A[3], Porpiglia F[4], Bove P[5], Schleicher M[6], Dasgupta P[7].

CONCLUSIONS: To date, there is limited evidence showing superior therapeutic benefits of AR-guided surgery when compared with the conventional surgical approach to the respective disease.

Development and validation of 3D printed virtual models for robot-assisted radical prostatectomy and partial nephrectomy: urologists' and patients' perception.

Porpiglia F[1], Bertolo R[2], Checcucci E[2], Amparore D[2], Autorino R[3], Dasgupta P[4], Wiklund P[5], Tewari A[6], Liatsikos E[7], Fiori C[2]; ESUT Research Group.

CONCLUSIONS: In our experience, 3D printing technology has been perceived as a useful tool for the purpose of surgical planning, physician education/training and patient counseling. Further researches are expected to increase the level of evidence.

Augmented reality assisted surgery: a urologic training tool

Ryan M Dickey,[1] Neel Srikishen,[1] Larry I Lipshultz,[1] Philippe E Spiess,[2] Rafael E Carrion,[2] and Tariq S Hakky[1]

CONCLUSIONS: is a novel and effective urologic surgical training tool in this pilot study. Both faculty and trainees view this new technology in a positive light. Augmented reality in surgery represents a paradigm shift within surgery, and urologic training may benefit from further exploration of this technology within residency programs and practices alike.

Hyperaccuracy Three-dimensional Reconstruction Is Able to Maximize the Efficacy of Selective Clamping During Robot-assisted Partial Nephrectomy for Complex Renal Masses

Francesco Porpiglia *, Cristian Fiori, Enrico Checcucci, Daniele Amparore, Riccardo Bertolo

Division of Urology, University of Turin, San Luigi Gonzaga Hospital, Orbassano (Turin), Italy
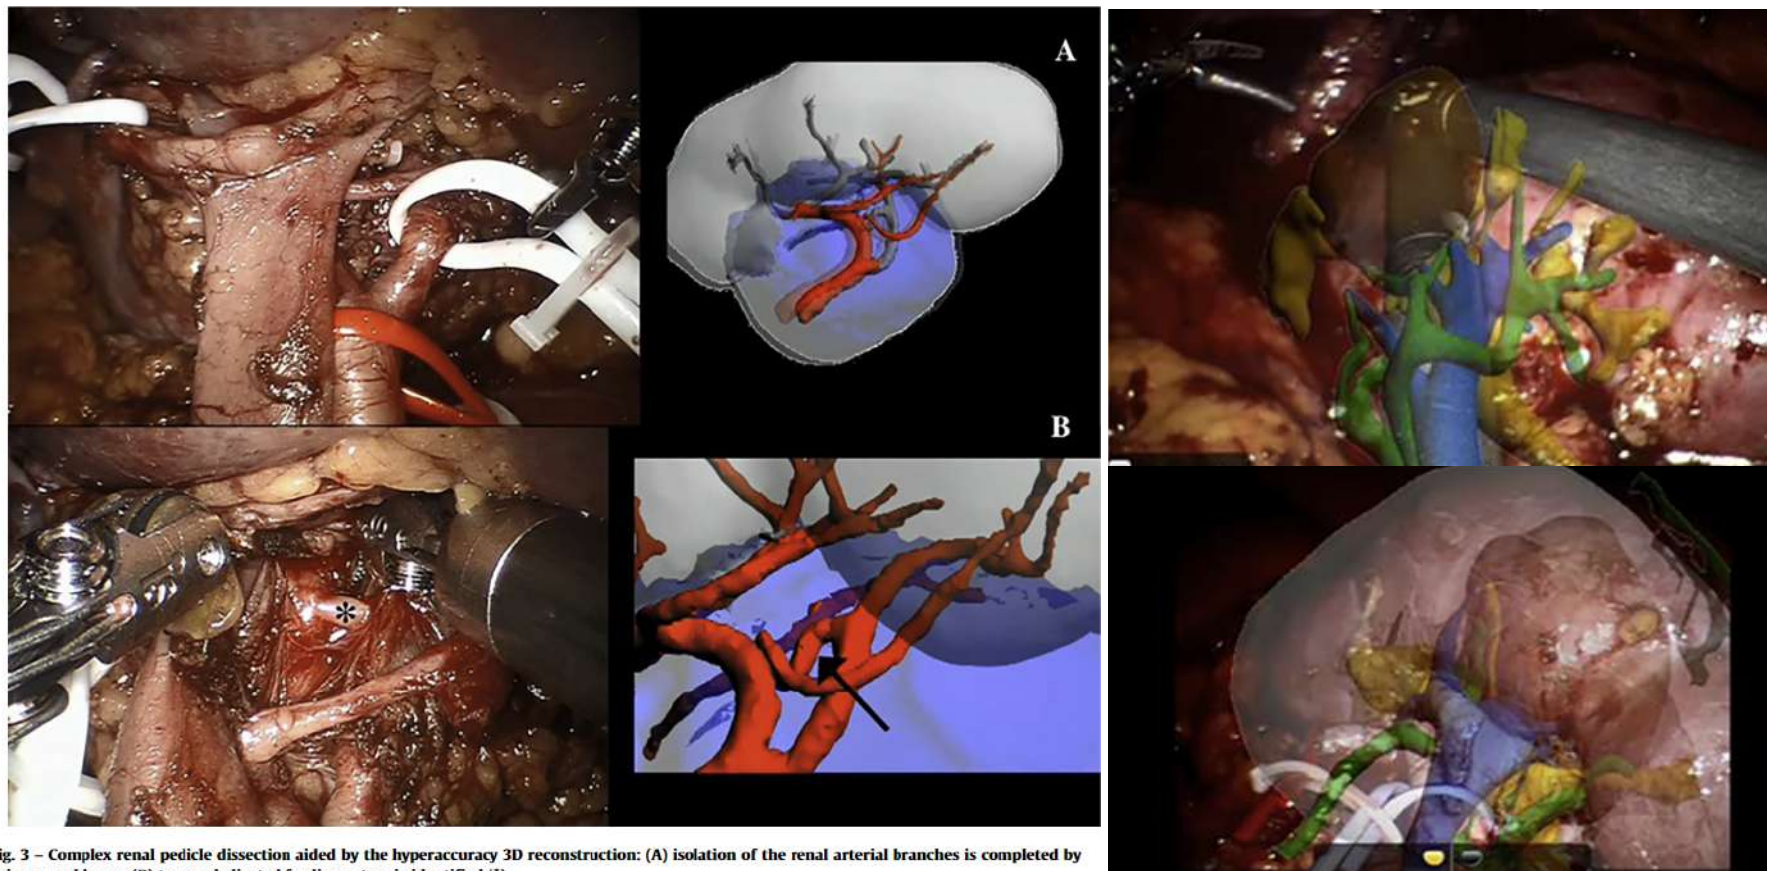

Fig. 3 – Complex renal pedicle dissection aided by the hyperaccuracy 3D reconstruction: (A) isolation of the renal arterial branches is completed by using vessel loops; (B) tumor dedicated feeding artery is identified (*).

Conclusions: HA3D virtual navigation ha consentito una rappresentazione fedele della vascolarizzazione arteriosa renale. La simulazione preoperatoria dell'ischemia selettiva è risultata fattibile ed efficace

ISTITUTO NAZIONALE TUMORI
IRCCS - Fondazione Pascale

➢ Appare una metodica <u>sicura ed efficace</u>

➢ La realtà aumentata (AR) può avere un ruolo significativo sulla <u>programmazione chirurgica</u> in particolare in merito al clampaggio superselettivo nelle RAPN

➢ AR ha dimostrato di avere un potenziale importante in merito alla <u>gestione intraoperatoria</u> della chirurgia conservativa renale

ISTITUTO NAZIONALE TUMORI
IRCCS - Fondazione Pascale

Le principali modalità di imaging aggiuntive per migliorare l'input visuo-tattile e la relazione del tumore con le strutture circostanti sono:

HA3D™ Virtual Model
Holographic 3D Model
3D Printed Model

Augmented Reality
